# SAMS CLUB REACT INTERVIEW - ROUND 2

Problem Statement:

The problem is to create a UI that allows for users to add new items, delete those items, and mark favorite items. Below is an example of a UI that would allow for these functions.

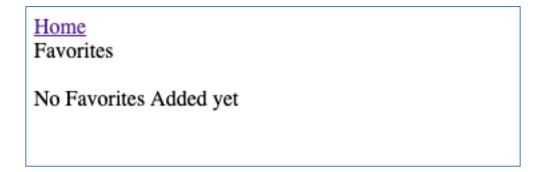

When a user clicks add item after there is data in both input fields, a new item should appear in the list. On selecting delete items should be removed from the list. When favorite is pressed isFavorite should change to true.
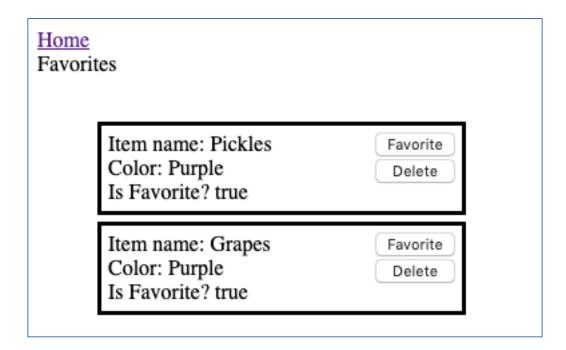

There is also a link to a favorites page, on this page, items that have been favorited should appear.

Sample :

Without any favorites:

Home
Favorites

No Favorites Added yet

With favorites:

Home
Favorites

Item name: Pickles   Favorite
Color: Purple   Delete
Is Favorite? true

Item name: Grapes   Favorite
Color: Purple   Delete
Is Favorite? true

NOTE:

Styling is not important. What is important is that the application functions as expected.
